

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

Claims 1-10 (cancelled).

11. (new) An information retransmission device comprising means (21) for exchanging information with a remote server (4) via a switched telecommunications network (6) and further comprising automatic means (23) for detecting the presence of a nearby output device (8) and automatic means (23) for retransmitting information received from said remote server (4) from said device (2) to an output device (8) that has been detected nearby and that is supplied with power by virtue of its connection to the telecommunications network (6) and is integrated into an adapter.

12. (new) A device according to claim 11, wherein said information exchange means (21) are adapted to interrogate said remote server (4) via said telecommunications network (6) on detection of a nearby output device (8) in order to receive information from said server (4) and retransmit it directly to said detected output device (8).

13. (new) A device according to claim 11, comprising means (22) for storing information in order to store information received from said remote server (4) and to retransmit it subsequently to an output device (8) detected nearby.

14. (new) A device according to claim 11, comprising means (25) for setting its operating parameters enabling a user and/or the remote server (4) to set parameters for retransmission of received information as a function of the identity of the detected output device (8).

15. (new) A device according to claim 14, further comprising means (26) for selecting and/or converting received information in order to enable the retransmission of some or all of said information in a format suited to output on the detected output device (8).

16. (new) A device according to claim 11, also being connected to at least one standard telephone device (10) and comprises means (27) for identifying the addressee of an incoming call and means (28) for switching calls in order to enable the switching of incoming calls between said at least one standard telephone device (10) and said information exchange means (21).

17. (new) A device according to claim 11, being adapted to exchange information with said output device (8) by means of a wireless radio connection.

18. (new) A device according to claim 17, exchanging information with said output device (8) in accordance with the "BLUETOOTH" protocol and said automatic means for detecting the presence of an output device (8) nearby and said automatic information retransmission means take the form of a BLUETOOTH communications module (23).

19. (new) An information retransmission system comprising a device (2) for retransmitting information received from a remote server (4) over a telecommunications network (6) in order to retransmit it to a output device (8) comprising means for receiving information coming from said information retransmission device (2) and means for output of that information, wherein said information re-transmission device (2) is a device according to claim 11.

20. (new) A system according to claim 9, wherein said output device (8) is an output device selected from the group comprising the following devices:

- a mobile telephone (8a);
- a personal digital assistant (8b);
- a watch (8c);

- a television (8d); and
- a portable computer (8e).
